OF REVIEWS ARE POSITIVE

POSITIVE 88.32%

11.68%

TOP-5 NEGATIVE KEYWORDS

#	KEYWORD	COUNT	SIGNAL
1	'will'	104	Unmet promises
2	'food'	73	Product quality
3	'tried'	69	Effort vs result
4	'chips'	68	SKU complaints
5	'really'	64	Emotional intensity

KEY FINDINGS

- 0 Strong Customer Satisfaction Baseline

1 An 88.32% positive rate exceeds typical e-commerce benchmarks (70–80%), signalling a broadly loyal customer base — a competitive advantage ready to be amplified.
- 0 The Expectation-Reality Gap

2 The top negative keyword is 'will' — a future-tense verb, not a product noun. Customers are citing broken promises. Marketing claims must be reconciled with actual product performance.
- 0 Concentrated, Traceable Product Failures

3 'Food' and 'chips' together yield 141 negative hits — a consistent pattern, not noise. QA has a precise target: isolate the underperforming SKUs and resolve at source.
- 0 Bipolar Opinion Landscape

4 Neutral sentiment is virtually absent. Customers are decisive — love or dislike. This polarisation means every quality fix converts a negative directly into a positive review.

STRATEGIC RECOMMENDATIONS

- QA PRIORITY

Audit 'food' & 'chips' SKUs — trace formulations, batch records, and packaging. Target resolution within 30 days.
- MARKETING

Audit all product copy for unverifiable performance claims; close the expectation gap driving 'will'-type dissatisfaction.
- CX / TECH

Auto-flag reviews containing the top-5 negative keywords for rapid Customer Experience follow-up and closed-loop resolution.
